

Brad Peery, Brad Peery Capital Inc.

316 Mid Valley Center, #270, Carmel, CA 93923

brad@peery-inc.com (831) 626-1470

With over 30 years of experience as a technology analyst, and as an investor in emerging technology companies, my objective is to identify emerging Clean Energy technologies, and serve as a resource in helping develop and commercialize those technologies in the U.S. and abroad.

Skill Overview

Mr. Peery's in-depth understanding of technology, combined with his understanding of economic, market and regulatory issues gives him a unique ability to identify technology and market trends and opportunities in highly competitive industries. He has also developed a wide network of possible funding sources for those technologies.

Companies Founded

Mr. Peery is a serial entrepreneur, having founded three companies:

In 1983, Mr. Peery founded Brad Peery Inc., a California based broker-dealer, which provided investment research to large money managers, underwrote over 200 media and telecommunications syndicates, and raised capital for 2 private companies;

In 1990, Mr. Peery founded Brad Peery Capital, an investment advisory firm which managed investment partnerships and provided financial and strategic consulting services in the media and communications sectors. Brad Peery Capital made investments in 23 private telecommunications technology and services companies. It is currently raising both private equity and venture capital for Ubiquity Broadband Communications.

In 2005, Mr. Peery was a Co-Founder of Ubiquity Broadband Communications (UBCOMM). UBCOMM has a management team which has successfully managed broadband wireless and cable networks. We have a joint venture with a company which provides broadband wireless in 5,500 square mile area of the California Central Valley. We are developing alternative meter infrastructure (AMI) services for utilities. We believe AMI deployments can become a broadband wireless "killer application", allow utility customers to save 10-20% on their energy bills and usage, and provide significant cost savings and operational benefits for the utilities. We are also seeking private equity financing to acquire low-density and rural cable systems on the West Coast which we will manage.

Prior Experience

Prior to founding his own companies, Mr. Peery headed the telecommunications research effort at Paine Webber Mitchell Hutchins in New York, and was on Institutional Investor's "All American Team" for four years. During that time, he testified before state regulatory commissions as an expert witness on rates of return for many AT&T subsidiaries.

Education

Mr. Peery received his M.B.A., B.S.E.E., and M.S.E.E from Stanford University. He also worked on a Doctorate in Finance and Economics at New York University and UCLA.
